

PROFESSIONAL SUMMARY

Data Analyst with 3+ years of experience transforming complex business data into actionable insights through SQL, Python, Power BI, Tableau, and Excel. Experienced in developing executive dashboards, automating reporting workflows, optimizing SQL queries, and improving data quality across insurance and healthcare domains. Proven ability to partner with cross-functional stakeholders to define KPIs, streamline reporting processes, and deliver analytics solutions that support operational efficiency and strategic business decisions. Strong background in data modeling, ETL, business intelligence, statistical analysis, and reporting automation.

EXPERIENCE

Data Analyst

Deloitte India

Jun 2022 – Jul 2024

- Analyzed insurance and financial datasets using PostgreSQL, MySQL, and Excel to deliver trusted KPI reporting, identify business trends, and support monthly executive reviews.
- Developed interactive Power BI and Tableau dashboards using DAX, Power Query, calculated fields, and parameters to monitor policy performance, revenue trends, and operational KPIs.
- Automated recurring reporting workflows by developing reusable SQL queries, Power Query transformations, and DAX measures, reducing manual reporting effort by **40%**.
- Conducted data validation, quality audits, and exploratory data analysis to identify anomalies, resolve inconsistencies, and improve reporting accuracy across enterprise reporting datasets.
- Optimized complex PostgreSQL queries, joins, and aggregations, improving dashboard refresh performance by **30%** and reducing report generation time.
- Collaborated with business stakeholders to gather reporting requirements, define KPI metrics, and translate business needs into scalable analytics and reporting solutions.
- Built budgeting, forecasting, and SLA performance dashboards that enabled business leaders to monitor operational performance, identify trends, and support strategic planning initiatives.
- Documented reporting logic, KPI definitions, and dashboard specifications to improve reporting consistency, governance, and knowledge sharing across analytics teams.

Senior Data Analyst

CVS Health

Feb 2025 – Apr 2026

- Developed enterprise Power BI dashboards monitoring pharmacy operations, prescription utilization, claims activity, and financial KPIs, reducing executive reporting turnaround time by **65%**.
- Optimized complex SQL queries, CTEs, stored procedures, views, and window functions across healthcare datasets containing **20M+** pharmacy claims and member records, improving reporting performance by **45%**.
- Automated recurring operational and executive reporting using Python, SQL, and Power BI, eliminating more than **25 hours** of manual reporting effort each week.
- Established automated data validation frameworks to identify duplicate claims, missing member records, and data quality issues, improving reporting accuracy by **30%**.
- Partnered with Pharmacy Operations, Finance, Clinical, Product, and Data Engineering teams to define business requirements, standardize KPI definitions, validate ETL pipelines, and deliver enterprise reporting solutions.
- Performed root-cause analysis on prescription fulfillment delays and operational workflows, identifying process improvements that increased processing efficiency by **18%**.
- Designed dimensional data models and optimized Power BI datasets using fact and dimension tables, reducing dashboard refresh times by **40%** while improving report scalability.
- Applied DAX, Power Query, statistical analysis, forecasting, and trend analysis to deliver executive scorecards, ad hoc analyses, and actionable insights supporting operational planning and resource allocation.
- Documented business rules, metadata, and reporting standards using Confluence while participating in Agile sprint planning, backlog refinement, and delivery tracking through JIRA.

TECHNICAL SKILLS

SQL: Advanced SQL, PostgreSQL, MySQL, SQL Server, Stored Procedures, CTEs, Window Functions

Programming: Python (Pandas, NumPy, Scikit-learn)

Business Intelligence: Power BI, Tableau, DAX, Power Query, Microsoft Fabric, SSRS

Data Engineering: ETL/ELT, Data Modeling, Star Schema, Dimensional Modeling, Data Warehousing, Data Validation

Cloud & Databases: Snowflake, Azure Data Factory, AWS, PostgreSQL, MySQL

Analytics: Dashboard Development, Business Intelligence, KPI Reporting, Data Visualization, Statistical Analysis, Forecasting, Trend Analysis, Root Cause Analysis, Ad Hoc Analysis

Tools: Excel, Git, GitHub, JIRA, Confluence, Agile

EDUCATION

Oklahoma City University

M.S. Data Science | GPA: 3.97 Oklahoma City, OK

- Relevant Coursework: Machine Learning, AI, Data Analytics, Statistical Modeling, Data Visualization, Database Systems
